SERVICE BULLETIN

STEERING

No. 63/1

March 1963

TO: ALL ROOTES GROUP DEALERS

SUBJECT: FRONT & REAR AXLE TRACK ALIGNMENT

MODEL: ALL MODELS FITTED WITH REAR SPRINGS METAXENTRIC
BUSHES

Isolated cases have been reported of rear wheels not following symmetrically the tracks of the front wheels when the car is moving straight ahead.

If variation from the center line of more than $\frac{1}{4}$ " are brought to your attention, you are advised to check first of all the location of the metaxentric bushes in the front eyes of the rear springs. The correct position of the bushes relative to the springs is clearly shown in the relevant Workshop Manual.
