CLUTCH AND  
PROPELLOR SHAFT

No. D-1

March, 1965

TO: ALL ROOTES DEALERS  
MODEL: SUNBEAM TIGER (260)  
SUBJECT: CLUTCH SLAVE CYLINDER PUSH ROD

The clutch hydraulic system on this model, as on all Group models is hydrostatic, consequently no adjustment should be made to the slave cylinder push rod, although the push rod is threaded and is fitted with a locknut.

The purpose of this is to mate up the Ford components with the Group ones and is only used on initial assembly. Under no circumstances must any adjustment whatsoever be carried out.
