PAGE I OF I

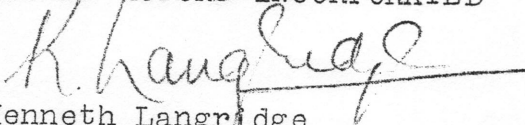

AUGUST, 1964

TO: ALL ROOTES GROUP DEALERS
MODEL: SUNBEAM IMP
SUBJECT: TRANSAXLE LUBRICATING OIL

This opportunity is being taken to again stress the importance of using the specified EP.80 oil in the trans-axle assembly in all normal circumstances of operation.

It is permissible in the event of non-availability of EP.80, but only where the minimum temperature does not fall below 20°C or 68°F, to use EP.90. Failure to follow this instruction may result in serious overloading of the synchromesh, particularly to first gear.
