TO ALL ROOTES GROUP DEALERS

IMPROVED FRONT DOOR WINDOW REGULATORS

A lower geared front door window regulator has been introduced to reduce the effort required to raise the windows and to avoid complaints of the windows dropping when they are in the closed position. The new regulator is fully interchangeable with the old.

After fitting a new regulator, it is important to check that clearance exists between the regulator mounting plate and the window channel track with the operating arms in all positions.

If more clearance is found to be necessary, simply pull out the inner door panel away from the operating arm and mounting plate of the regulator.

Window Regulator Part Numbers:

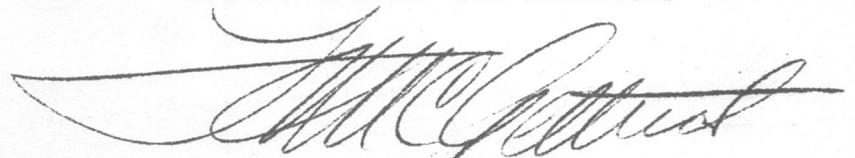

Super Snipe Series I & IA - 2213148 R/H and 2213149 L/H

These regulators have been fitted in Production from the following Chassis Numbers:

Super Snipe Sedan - from B.8004515
Super Snipe Estate - from B.8004758

Kindly bring this to the attention of all concerned.
